Adoption behaviour of sugarcane growers regarding integrated pest and disease management practices in Nandurbar district

P. L. PATEL AND S. V. SUPE

ABSTRACT
The present study was undertaken in Nandurbar district with the specific objectives to know the adoption behaviour of sugarcane grower regarding IPDM practices. It was observed that regarding practice wise adoption of IPDM, most of respondents followed cultural operations followed by mechanical practices. In distributional analysis, it was concluded that majority of the respondents (60 per cent) had medium level of adoption of IPDM practices. In relational analysis it was observed that education, land holding, area under sugarcane, annual income, socio-economic status and sources of information were positively and significantly correlated with adoption level.
