Socio-economic, psychological and extension attributes of trained and untrained farmers of K.V.K. Bijapur

N.K. SUNIL AND N. MANJULA

ABSTRACT
The study conducted in the jurisdiction of K.V.K., Bijapur district of Karnataka state revealed that, the trained farmers were middle aged, with Higher Secondary to College education, having medium level of land holding and low-income. They had medium level of involvement risk and scientific orientation, high media and extension participation and medium cosmopolitan when compared with their counter parts untrained. They suggested for community vermi compost pits and need to have low interest loans and subsidy for the loans.
